

DECLARATION

Casino Royale is an improved turf type seeded bermudagrass developed by Pure Seed Testing in North Carolina. Germplasm from both northern and southern strains resulted in a bermudagrass with cold tolerance allowing for a longer growing season. **Casino Royale's** improved turf quality, dark green color and fine uniform texture make for an excellent, easy to maintain turf surface.

Casino Royale is well adapted for temperate, sub-tropical and tropical areas where warm season grasses are grown. Because of its improved cold tolerance, **Casino Royale** has had success in cooler temperatures of the transition zone.

APPLICATION

- ✓ Sports Turf
- ✓ Golf Course Fairways and Roughs
- ✓ Cemeteries
- ✓ Erosion Control
- ✓ Home Lawns
